Bateson 120V

*** Sold ***

Model 120V Van Trailers are based on our successful and well proven 720 Platform trailers. They have a heavy duty galvanised steel chassis with a waterproof, lightweight glassfibre body. Plated at 750Kg gross weight the trailer has a carrying capacity of nearly half a ton and does not require overrun brakes, however, the trailer and its load must weigh less than half the weight of the towing vehicle. The floor is 18mm non-slip phenol coated plywood and the sides are protected inside by galvanised steel tying rails and the front by steel bulkhead rails. A lockable lift up rear door is supported by gas springs. It allows a clear access and offers weather protection during loading. Standard equipment includes full road lights, load securing rings, front prop stand, a spare wheel and rubber side protection strips. Internal dimensions are the minimum door size. Standard equipment includes a locking coupling, spare wheel and carrier, and our ingenious coupling mirror, which allows the hitch to be seen during coupling to eliminate misalignment and damaged bumpers.

Width	1360	Length	3200
Height	1830
