## Bateson 35MD

**£ 4,130**

**Plus VAT**

3500 kg Excavator trailer for machines up to 2775 kg Model shown as standard Model 35MD is a trailer designed to transport tracked machines up to 2775 kg. It is fabricated with a one piece heavy duty, hot dipped galvanised steel chassis with integral welded steel mudguards. It is supplied with solid steel sides to enable heavy machines to be secured to the hooks welded to the chassis and without a spare wheel as standard to keep the unladen weight to a minimum, allowing the heaviest possible machines to be carried within the maximum legal weight of 3500 kg. For wheeled machines we would recommend the TP range.
